Triangular Recon Aircraft May Be Supporting F-117A

WILLIAM B. SCOTT/LANCASTER, CALIF.

The U.S. Air Force is believed to be operating several highly classified triangular-shaped stealth aircraft with its Lockheed F-117A fighters, to provide real-time reconnaissance imagery.

The single-pilot aircraft also could eventually support B-2 bomber missions in a similar manner, possibly augmenting other systems in locating and attacking mobile strategic missiles.

About 25-30 of the special reconnaissance aircraft-designated the TR-3A "Black Manta"-could be placed in service eventually, based at Holloman AFB, N. M., and Tonapah, Nev. Initial TR-3As are collocated with F-117As, although housed separately in larger hangars.

Several TR-3As are believed to have been deployed temporarily to Alaska, Britain, Panama and Okinawa. More recently, they are believed to have supported F-117A operations in the Persian Gulf

The aircraft is designed to collect and transmit near-real-time digital photo data for immediate tactical applications. With a range of more than 3,000 naut. mi, and the ability to operate at both low and high altitudes, the TR-3A is a stealthy, versatile reconnaissance platform capable of both tactical and strategic duties.

By employing sophisticated digital transmission techniques, the TR-3A can relay time-critical data through airborne Lockheed TR-1 aircraft or military satellites such as the Defense Support Program spacecraft. Consequently, electrooptical data reach end-users in minutes rather than the hours required today with systems that rely on photographic film.

The need for more timely reconnaissance data has prompted developments of new real-time systems for the RF-16 such as the Advanced Tactical Airborne Reconnaissance System, or ATARS (AW&ST Apr. 22, p. 78).

During Desert Storm, TR-3A data might have been limited to F-117A support only, possibly for intelligence security reasons. Allied Central Command officers acknowledged that obtaining adequate reconnaissance information was a definite weak link in the air campaign.

At one point, Saudi Arabian air force Northrop RF-5s were requested to augment USAF RF-4C operations. This implied that TR-3A data were not distributed widely for use by other than F-117A forces.

wingspan. The reconnaissance aircraft reportedly has a range of more than 3,000 naut. ml.

Some industry experts believe the Air Force intends to use TR-3As with the B-2, possibly to bolster the bomber's effectiveness against relocatable targets such as strategic missiles. Critics of the B-2 have repeatedly seized upon this apparent deficiency as partial justification for canceling the next-generation strategic bomber program or severely limiting its production

For years it has been suspected that a closely held aircraft such as a TR-3A existed, although its designation and mission were unclear. The classified reconnaissance aircraft has been observed flying at night with multiple F-117As near Edwards AFB, Calif., since 1989. A

TR-3A Evolved From Classified Prototypes, **Based on Tactical Penetrator Concept**

LANCASTER, CALIF.

The U.S. Air Force's stealthy near-real-time reconnaissance aircraft, the TR-3A, evolved from a number of 1970s-era classified programs aimed at developing both a deep-interdiction strike fighter and a companion vehicle to gather target location data.

Sponsored by the Defense Dept., Central Intelligence and Defense Intelligence agencies, the Air Force and possibly the U. S. Navy, several of these "black world" study contracts were awarded in 1976. For example, the Air to Surface Technology Evaluation and Integration (ASTEI) program was created to develop concepts for an advanced deep-interdiction fighter. Three contractors—Boeing, McDonnell Douglas and Grummanwere awarded \$600,000 study contracts and charged with developing mission-oriented concepts that included low radar cross-section (RCS) airframes.

The same year, the government's "Blue Team" was formed to identify operational applications for stealth technologies produced by ASTEI, Have Blue and other classified efforts. At least 10 separate "black" aircraft programs based on stealth techniques were recommended to the services and intelligence agencies between 1976 and 1983. These included fighter, attack and bomber aircraft, as well as cruise missiles and unmanned aerial vehicles (UAV).

Two key proponents of stealth aircraft at that time were Lt. Gen. Robert Bond (who was killed in an aircraft crash in 1984) and Lt. Gen. Thomas Stafford (USAF, Ret.), a former astronaut and onetime commander of the Flight Test Center at Edwards AFB, Calif.

Blue Team efforts eventually prompted the Air Force to initiate the Covert Survivable In-weather Reconnaissance/Strike (CSIRS) program, which was to yield two separate stealth aircraft designs. One was to be a tactical strike fighter; the other would be dedicated to a tactical reconnaissance role. The program was jointly managed by the Flight Dynamics and

Avionics laboratories at Wright-Patterson AFB, Ohio.

In mid-1976, Lockheed was awarded a contract to build two stealth fighter prototypes under the Defense Advanced Projects Agency's Have Blue program, edging out Northrop's design (AW&ST Apr. 22, p. 30). The Air Force also initiated wind tunnel and RCS model tests of a Tactical High Altitude Penetrator (THAP) spanloader concept based on proposals submitted by Northrop under the ASTEI and CSIRS programs.

Northrop received a fixed-price research and development and demonstration/validation contract from the Air Force in late 1978 to build a stealthy high-altitude tactical reconnaissance aircraft. A THAP demonstrator made its first flight from the secluded Groom Lake, Nev., facility in 1981.

The company reportedly received a follow-on Air Force contract in 1982 to build what was to become the TR-3A, based on the THAP concept. []

Wind tunnel tests were conducted on this model of a Tactical High-Attitude Penetrator (THAP) in 1978. The concept evolved into the U. S. Air Force TR-3A stealth reconnaissance aircraft that is believed to operate with Lockheed F-117A fighters.

triangular vehicle operating during daylight hours near Tehachapi, Calif.—about 30 naut. mi. from Edwards—in May, 1990, also closely matched descriptions of the TR-3A. Initially, the delta-shaped aircraft was thought to be a Navy A-12 prototype or proof-of-concept vehicle (AWAST Oct. 1, 1990, p. 20).

The TR-3A is based on a Northrop concept for a tactical reconnaissance vehicle developed under a multipurpose Air Force stealth technology program in the mid-1970s called Covert Survivable Inweather Reconnaissance/Strike, or CSIRS (see story p. 20). Northrop's stealthy Tactical High-Altitude Penetrator (THAP) design began radar cross-section and wind tunnel tests in 1976, and photographs of a THAP model were released publicly.

At the time, "stealth" technology was not considered "black" or ultra-classified.

A THAP prototype first flew in mid-1981, about the same time that Lockheed started flying its No. 1 full-scale development F-117A. The manta-ray-shaped demonstrator was approximately the size of a McDonnell Douglas F/A-18, employing rounded, blended surfaces and radar-absorbing material.

'RUDDERATRONS' FOR ROLL/YAW .:

Engine inlets and exhausts were on the prototypes' top surface, similar to the configuration seen later when an artist's rendition of the B-2 bomber was released. Dual nonafterburning turbofan powerplants were buried in the fuselage and fitted with exhaust flow mixers to reduce the aircraft's infrared signature. Rounded twin vertical tails—called "rudderatrons"—were canted inward, providing both roll and yaw control. Trailing-edge elevon surfaces outboard of the tails provided pitch and roll control.

The THAP design relied heavily on radar absorbing materials (RAM)—as well as blended, curved surfaces—to reduce its radar cross-section. Leading and trailing edges were covered with a foam core wrapped in a black plastic RAM film. Use of RAM instead of faceted surfaces (similar to the F-117A design) resulted in a heavier aircraft than the fighter, but was acceptable for a long-range reconnaissance platform.

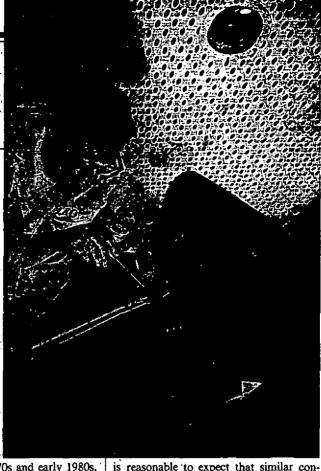

The single-pilot THAP concept aircraft was a spanloader design about 38 ft. long. It had a 56-ft. wingspan, stood approximately 14 ft. high and was rated for a maximum takeoff weight of 55,000-60,000 lb.

The TR-3A is believed to have a slightly larger planform, possibly up to 42 ft. long with a 60-65-ft. wingspan. It may be powered by modified twin General Electric F404 engines rated in the 12,000-lb.-thrust range, but has a much quieter noise footprint than the F-117A. This is attributed to exhaust nozzles placed well forward of the TR-3A's wing trailing edge, shielding them from ground-based acoustic and infrared detectors.

During the late 1970s and early 1980s, Air Force-sponsored studies yielded a number of stealth aircraft concepts having delta-winged, spanloader airframes and engines buried in the fuselage, particularly for long-range bombers (AW&ST June 16, 1980, p. 136; Jan. 29, 1979, p. 113). It

is reasonable to expect that similar concepts developed in that period would have made sense for long-range, high-altitude reconnaissance vehicles.

(Research assistance provided by Joseph Jones, aerospace consultant.)

Israeli Company Offers Vanguard UAV for Civilian Use

NEW YORK

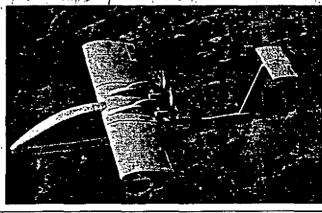

Electronic Security Measures, Ltd., of Israel is offering the Vanguard unmanned aerial vehicle for civilian use.

Suitable missions for the twin-engine UAV include traffic control, video and voice relay, drug interdiction, environmental monitoring, border surveillance and agricultural surveying. It has a 5.1-meter wingspan and an overall length of

3.24 meters. The UAV weighs 90 kg. empty and has a maximum takeoff weight of 211 kg.

The glass-fiber-fuselaged Vanguard has a maximum speed of 92 kt. and cruises at 65 kt. It can stay aloft for 16 hr. A basic system comprises UAVs, a control station unit, a takeoff and landing unit, ground support equipment and an instrument landing system package. Payloads can include color, black-and-white or low-light television cameras or a forward-looking infrared.

The UAV can be launched in less than 30 min. Officials of the Tel Aviv company said Vanguard is undergoing final flight tests.

RECENT UFO SIGHTINGS OVER LONDON

1. Many addressees will be aware that there has been a recent spate of UFO sightings over the London area. Witnesses describe a large saucer or cigar-shaped luminous object, with a red flashing light underneath. Some witnesses also report having theard the sound of an engine.

sto file

- 2. Any report that fits this pattern is almost certain to have been the airship that has been flying over London recently the main body of which is strongly illuminated. I have actually seen it myself from a number of angles and distances, and can appreciate why many people are filing UFO reports.
- 3. Whilst we have standard lines to take on UFOs, it is perfectly acceptable to suggest any logical explanation for a sighting to a caller, and in this instance I suspect it might put a few people's minds at rest to suggest that if the details fit the object that they saw was this airship.
- 4. I hope this is helpful.

BRITAIN, ITALY PAVE WAY FOR EH101 PRODUCTION PLANT

British and Italian officials have signed a new memorandum of understanding. paving the way for investment in production facilities for the Agusta/Westland EH101 helicopter.

This MOU, which authorizes the preparation of production facilities, will be followed by another later this year committing the two nations to production orders.

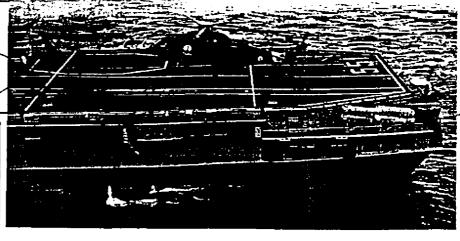

Last month, U. K. Ministry of Defence officials formally signed a 1.5-billion pound (\$2.7-billion) contract to supply 44

USAF/MCDONNELL DOUGLAS C-17 Was grounded last week for several days to repair fuel leaks in the two inboard wing tanks. Test force officials said they elected to completely reseal the tanks rather than resort to a "band-aid fix." A test flight was planned for Nov. 8, after the tank sealant had cured. The C-17 has flown 28.8 hr. on 15 flights, and has completed air data system calibrations, flutter instrumentation checks, nose gear flow visualization (tuft) tests and at least one crosswind landing. The second secon

TWO UNUSUALLY LOUD SONIC BOOMS heard along the west coast from San Diego to north of Los Angeles, Calif., may have been produced by high-flying classified aircraft returning to test ranges in Nevada. Twenty-five of the U.S. Geologic Survey's 220-sensor system for pinpointing earthquake epicenters detected the passing shock waves around 6:30 a.m. on Oct. 31. The instruments have recorded shock waves from SR-71 flights and space shuttle reentries in the past. As a result, USGS scientists were able to determine that the unknown aircraft were flying at speeds up to about Mach 3 and altitudes of 23,000-33,000 ft. The sonic booms were 100 sec. apart, and detected along slightly different ground tracks, but on a general south-to-north heading. Air Force, Navy and NASA/Dryden officials claimed they had no high-speed aircraft airborne at that time.

PRATT & WHITNEY and Spain's Empresa Nacional Santa Barbara last week agreed to form a Spanish-based joint venture company that will manufacture maintenance tooling for commercial transport gas turbine powerplants. The joint, 50-50 venture marks Pratt & Whitney's first dealings in Spain and could be the first of

Charles and the Contract of th

EH101 Merlin antisubmarine warfare (ASW) helicopters for the Royal Navy. The agency in September selected IBM Corp. as prime contractor to complete development of the Merlin helicopter and manufacture it, with Westland as its partner (AWAST Sept. 9, p. 24). The Merlin

will replace the Westland Sea King. Other orders are expected to follow. Italy is expected to order 36 EH101 naval helicopters to replace Agusta-Sikorsky SH-3D rotorcraft, and the Canadian Defence Force has selected the EH101. The force has a requirement for 35 ASW aircraft. D

several agreements in that country that may result in the eventual Spanish manufacture of components for Pratt's PW4000 and PW2000 commercial gas turbines.

LAUNCH OF THE EUTELSAT 2 communications satellite scheduled at Cape Canaveral Nov. 14 will be delayed until faulty transistors in the Atlas 2 launch vehicle Centaur stage inertial navigation unit are replaced and tested. The problem also is delaying the launch of a Defense Systems Communications Satellite by another Atlas 2. The delay of Eutelsat is the fourth time launch of this spacecraft has been postponed. Honeywell supplies the navigation unit to General Dynamics.

GALILEO OFFICIALS planned to start transmitting the first picture of an asterold on Nov. 7, taken during the Oct. 29 Gaspra encounter (AW&ST Nov. 4, p. 26). The transmission of the single frame is expected to take eight days, and several

more days will be required to process and interpret the photo. Gaspra will subtend about 80 pixels in the black-and-white image and chances are better than 95% that the asteroid will be in the frame, based upon the good navigation.

THE U.S. NAVY DECOMMISSIONED the aircraft carrier Lexington Nov. 8 and will replace it as its training carrier with the Forrestal. Training plans for the 14month period during 1992-93 in which Forrestal is due for major repairs and refurbishment have not been decided. The Navy's oldest carrier now is the Midway. due to be decommissioned next April.

SIKORSKY AIRCRAFT and Japan's Mitsubishi have launched a joint study assessing the commercial international helicopter market. The study is focusing on the need for a commercial, 19-passenger, wide-cabin-body derivative of Sikorsky's H-60 aircraft.

combustion process.

en the wave strikes the thrust wall chamber's forward end, it rebounds, ating most of the combustion prodward the nozzle. Some of the produnder high pressure—are ejected wave through the air inlet openings e outside airstream, creating a toroitex around the chamber's exterior, cle then repeats.

Naval Postgraduate School expericonducted by D. Helman, R. P. e and Shmuel Eidelman during the 80s, a small detonation tube with es 2-4% of the total main chamber e was used. An automobile ignition ignited the fuel-air mixture inside all tube, creating what is called the ary" detonation wave. That relasmall wave, when introduced into ain chamber, triggered the strong "detonation wave.

larger PDEs, other means of generthe main wave also may be used. larger the engine, the easier we it will be to initiate detonation," m Grossmann, chief scientist for

SAIC's applied physics operation in McLean, Va., said. "A small [primary] detonation tube filled with oxygen and hydrocarbon fuel takes a very small amount of energy to detonate the mixture. The wave created by that detonation can enter the main chamber through a series of small ports and [interact] with the mixed air and fuel."

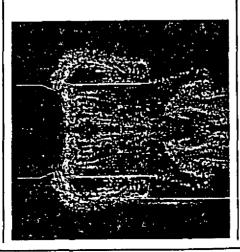

By introducing the primary detonation into the chamber through several ports around the circumference, a series of small spherical-shaped waves expand as they travel forward, converging and creating a near-vertical wavefront about half-way down the chamber.

Pulsed detonation engines have several potential advantages over conventional powerplants:

They operate on a "constant volume" combustion process that can theoretically achieve higher efficiencies than a "constant pressure" engine such as a conventional turbojet. Although evaluated in the early part of this century and again in the 1940s, unsteady combustion engines were difficult to design and optimize because they operate in an intermittent or pulsing mode. Constant pressure, continuous combustion systems (such as turbojets and rockets) were easier to control and optimize, so they developed more rapidly than the unsteady combustion type.

However, the concept remained attractive, because PDEs can be scaled over a wide range of powerplant sizes and thrust levels. According to Eidelman, SAIC senior research scientist in computational fluid dynamics, PDE engines can be produced in many sizes. Theoretically, PDEs on the order of a few inches in diameter can produce thrusts of several pounds. Larger engines can feasibly produce thrust in the thousands-of-pounds range.

SAIC studies indicate that PDE thrust levels vary linearly with detonation chamber volume and operating frequency. If the fuel injection/detonation frequency is doubled, for example, and chamber volume is increased by five times, the new engine will produce 10 times more thrust. Just how far this scaling relationship

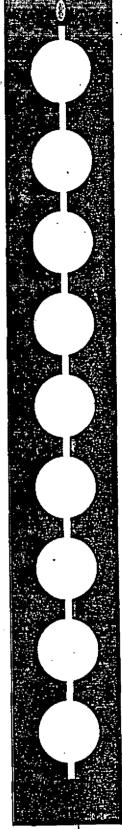

holds true is still under investigation.

■ PDEs have a high thrustto-weight ratio and low specific fuel consumption rates, giving them greater range than equivalent-size jet engines. Without complex compressors, turbines and pumps, PDEs also can be substantially lighter weight than jet and rocket engines—a characteristic of great interest to National Aero-Space Plane (NASP) designers.

E PDEs are mechanically simple. It appears that they can be built with very few—if any—moving parts, based on CFD and laboratory work completed during the last few years. As a result, they offer the potential for low manufacturing costs.

 PDEs can be operated as air-breathers or as rockets, using free-stream air or onboard oxidizers, respectively. They also are good candidates for inclusion in hybrid powerplant systems, since they are operable over a broad speed range. For example, PDEs will operate in static conditions—such as sitting on a runway-or at high speed, making them attractive for single-stage-to-orbit applications. A number of NASP propulsion system researchers are familiar with PDE theory and technologies, prompting speculation that PDE cycles might be candidates for powering a NASP vehicle through at least part of its flight regime.

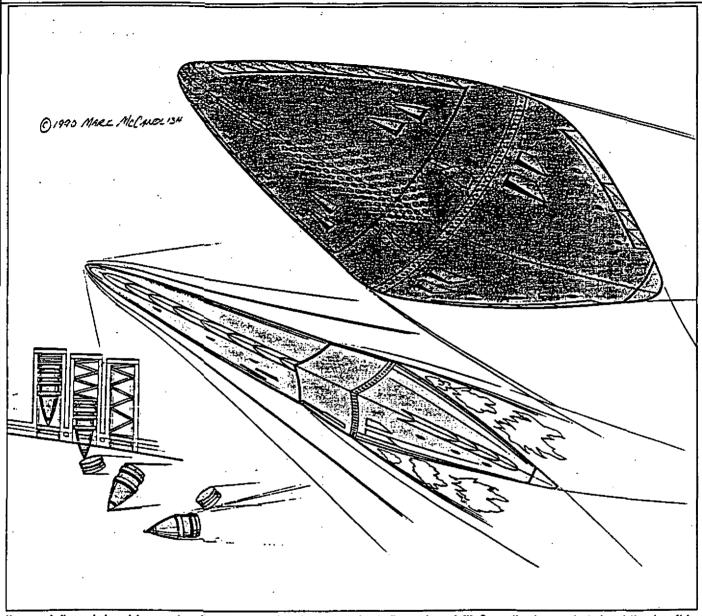

(Assistance to AW&ST provided by Larry Smith, a technology researcher.)

Described as "cotton balls strung on heavy yarn" by D. C. Card, a mechanical engineer who saw it forming at high altitude over Denver in 1989, this distinctive contrail matches exhaust patterns that could be expected from a pulse detonation engine. At its high altitude, the unknown dark-gray aircraft was barely visible in tate-afternoon sunlight.

Scientists' and Engineers' Dreams Taking to Skies as 'Black' Aircraft

WILLIAM B. SCOTT/LOS ANGELES

Unmanned diamond-shaped hypersonic vehicle has control surfaces on leading and trailing edges, and 121 ports for dispensing nuclear war-

heads (insert, lower left). Conventional powerplants boost the aircraft to supersonic speeds, where an external burning mechanism takes over.

Super-classified "black" aircraft development programs have served the U. S. and its allies well during the last 40-plus years, providing specialized vehicles such as the U-2/TR-1, SR-71 and F-117A. Still unproven, but also products of this special access shadow world, are the B-2 bomber and Navy A-12, among others.

How many additional air vehicles may have been developed, yet never revealed publicly, often is debated but rarely proven.

It is certain, however, that eight years of the Reagan Administration were good to the black world. For whatever reason.

billions of dollars were pumped into highly classified, special access programs and new facilities, allowing creative scientists and bright engineers unprecedented opportunities to experiment and test their wildest dreams. Their only constraint, apparently, was that projects be linked to operational considerations and pragmatic applications.

A number of those dreams have taken wing in the past few years, and increasing numbers of new, exotic vehicles have been reported by ground observers throughout the U. S. recently (AWAST Dec. 18, 1989, p. 42; Oct. 1, p. 22). In addition, airline and military pilots have reported seeing

unusual high-speed, high-altitude, maneuvering vehicles during the last few years.

What these sightings add up to is this: The U.S. has developed a fleet of new aircraft and is either testing them or already flying several types in operational service. Because they are considered "super-super-black" programs, military and other government officials deny their existence.

Those who are briefed and know such aircraft exist cannot admit it, and those who are not briefed simply do not know. The best guesses of experts—and those who think they should know, by virtue of their position—really are no more reveal-

Secret Advanced Vehicles Demonstrate Technologies For Future Military Use

dvanced secret aircraft developed at highly classified government facilities in the Nevada desert over the last decade are demonstrating and validating new technologies for the U. S.'s future fighters, bombers and reconnaissance platforms.

Although facilities in remote areas of the Southwest have been home to classified vehicles for decades, the number and sophistication of new aircraft appear to have increased sharply over the last 10 years, when substantial funding was made available for "deep black" projects.

Vehicles now flying from these well-guarded sites include both manned and unmanned hypersonic-capable aircraft designed to perform strategic reconnaissance and other, less conventionally defined missions. The classified fleet also comprises a number of large-winged concept demonstrators that evolved into the Air Force's B-2 bomber and the Navy's A-12 next-generation attack aircraft. Several vehicles, though, appear to incorporate technologies that outstrip those now employed by engineers charged with developing more traditional, current-generation aircraft.

A number of these aircraft have been seen and heard repeatedly by ground-based and airborne observers in the western U. S. over the last few years. Based on about 45 reports provided by people who have seen, heard or had access to the advanced aircraft, there now appear to be at least two—but probably more—distinct types of vehicles:

- A triangular-shaped, quiet aircraft seen with a flight of Lockheed F-117A stealth fighters several times since the summer of 1989. This may be a demonstrator or prototype of the General Dynamics/McDonnell Douglas A-12. Navy officials recently noted that full-size test models will soon be "exposed to public view" during testing, suggesting that predecessors of the A-12 are already flying.
- A high-speed aircraft characterized by a very loud, deep, rumbling roar reminiscent of heavy-lift rockets. When observed at medium altitude, this aircraft type often makes a pulsing sound and leaves a thick, segmented smoke trail or contrail (AW&ST Dec. 18, 1989, p. 42). Lighting patterns indicate the aircraft is on the order of 100+ ft. long, but no reliable de-

scription of a planform has been reported to AVIATION WEEK & SPACE TECHNOLOGY.

■ A high-altitude aircraft that crosses the night sky at extremely high speed. Normally, no engine noise or sonic boom is heard. The vehicle typically is observed as a single, bright light—sometimes pulsating—flying at speeds far exceeding other aircraft in the area, and at altitudes estimated to be above 50,000 ft. Such aircraft have been reported by both ground-based and airborne observers. This may be the same vehicle as the one characterized by a loud, pulsing noise when flying at lower altitude and slower speed.

Two sightings of wing-shaped aircraft occurred during daylight hours, while the remainder occurred only at night. Descriptions and a sketch from one of the daytime observations closely match the A-12 planform (AW&ST Aug. 20, p. 17).

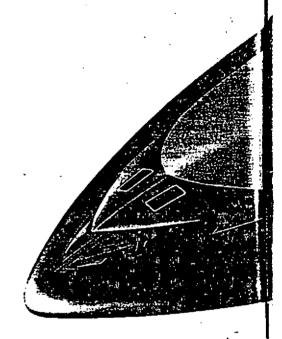

These primary types of "black" aircraft appear to employ relatively conventional propulsion systems, although more advanced than those available to the "white" world. In addition, there is substantial evidence that another family of craft exists that relies on exotic propulsion and aerodynamic schemes not fully understood at this time. Data pertaining to this type of vehicle are being studied by Aviation Week and several consultants.

The variety of highly classified "black-world" aircraft has prompted industry experts to suggest that the term "Aurora," which has been used in reference to a purported new classified hypersonic aircraft, may be inappropriate. Instead, Aurora may be one of several code names "nested" within other code names, all referring to a class of aircraft designed for multiple missions.

A line item identified as "Aurora" in a Fiscal 1986 Procurement Program document dated Feb. 4, 1985, supposedly was simply one "site" for B-2 bomber funds when that program was highly classified, according to a government official. Listed under the "Other Aircraft" category, "Aurora" was projected to receive sharply increased funding. The Fiscal 1986 budget request for Aurora—\$80.1 million—jumped to \$2.272 billion in Fiscal 1987, according to the document.

Because it was listed under a strategic reconnaissance section, the Aurora refer-

Artist's concept of an unmanned hypersenic vehicle is based on a composite of descriptions provided by observers who have seen and heard high-speed aircraft in the southwestern U.S. Such a vehicle may fly with the inlet below a waveridertype fuselage, but invert prior to landing.

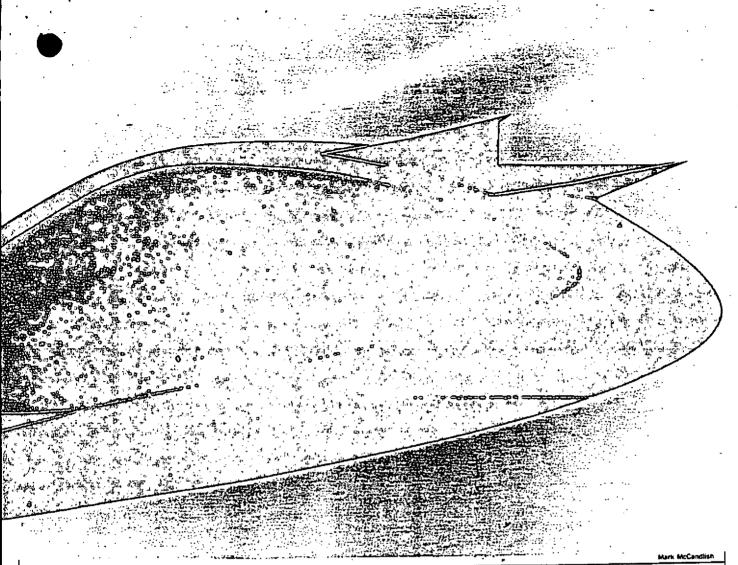

ence was widely thought to be a subtle admission that an SR-71 replacement was under development. However, given the B-2 funding practices of the time, the Aurora name may not have been related to a new hypersonic aircraft as originally believed. The Air Force has yet to provide a detailed breakdown of B-2 costs.

Several of the secret aircraft believed to be based in Nevada may be experimental or prototypes. At least one type has advanced to the production and deployment phases, and may be capable of hypersonic flight, according to officials who have been closely associated with classified programs at several Nevada test sites in recent years. One senior official said, "We don't really do anything strictly for experimental reasons. There's usually an operational twist." Several of these people had hands-on experience with a number of the classified vehicles.

Although prevented from discussing specific projects, these individuals said, "There are bigger and better things out there," referring to aircraft based at the Nevada test locations.

Several aerospace manufacturers are involved in the development, testing and production of these aircraft.

For one, Lockheed's advanced develop-

ment (Skunk Works) unit has been linked to what has been called an Aurora project—for lack of another name—by financial analysts, and probably is involved in any number of classified aircraft programs. About 50-100 Lockheed employees participated in a hypersonic test program called UAB (believed to mean "Unmanned Air Breather") in the early 1980s, conducting flight tests off the coast of California. That vehicle may have been a predecessor to one of the aircraft types seen and heard in the southwestern U.S. over the last year.

In the mid-1980s, Lockheed proposed a Mach 7-8 "transatmospheric vehicle" or MAV as an SR-71 replacement and as an advanced tactical fighter concept. The name "Aurora" was associated with that proposal, according to government officials. The Air Force considered the concept too risky and canceled the project, the officials said. However, they acknowledged that diamond and triangular-shaped vehicles are "the trend now." A recently released artist's depiction of the Navy A-12 attack aircraft supports that statement.

Lockheed executives have denied any knowledge of an "Aurora" aircraft and have said they "wish there was such a thing in the works." from a business standpoint. However, the company's advanced development unit is believed to have about 4,000 employees on its payroll, even though TR-1 and F-117A production and YF-22A prototype construction have been completed. The unit has released a number of personnel through retirement or layoffs during the last year, but still maintains a sizable workforce, including approximately 10 pilots.

Other major aerospace firms almost assuredly are participating to some degree in classified aircraft development and testing. As one industry observer noted, "Other companies have their version of the Skunk Works, too, but they prefer to keep a low profile."

As an example, at least one major aerospace corporation has developed and is marketing a concept for an unmanned hypersonic vehicle that would target dense enemy air defense networks, clearing the way for manned bombers to follow. Designed to operate at speeds around Mach 10 or higher, the waverider-type vehicle would be extremely difficult to intercept. It also would have the high-g maneuverability necessary to escape a new family of lethal surface-to-air missiles deployed throughout the Soviet Union in recent

The unmanned hypersonic concept has been presented to several government agencies. In explaining the concept's evolution, a marketing official said, "We looked around and saw that all the pieces were there" to build a hypersonic, unmanned aircraft for this mission. "I can't believe, though, that we were the only ones smart enough to see that. The necessary technologies have been available for five or six years."

Knowledgeable government officials charged with oversight and funding of military programs, however, continue to be extremely skeptical of reports about secret hypersonic aircraft based in Nevada. One respected official said he is confident that there is no such thing as a class or family of high-speed aircraft codenamed Aurora, either in name or in fact. Industry experts who have worked on "deep black" programs, however, believe that it would be highly unusual for all but a very few political officials to have access to or knowledge of these programs. History has shown, they maintain, that elected officials and their staffs are poor security risks. Sensitive information, they say, will invariably be leaked through these channels if it is perceived politically advantageous to do so. 🗆

Multiple Sightings of Secret Aircraft Hint at New Propulsion, Airframe Designs

Multiple reports from well-qualified observers lend substantial credence to the existence of numerous secret aircraft flying from remote bases in the southwestern U.S., regardless of the political, funding or technical arguments against that probability.

Over the past 13 months, large, triangular wing-shaped aircraft characterized by a relatively quiet propulsion system have been the object of at least 11 sightings near Edwards AFB, Calif., and one near Fresno, Calif. These are supported by additional reports of similar vehicles seen and heard around remote central Nevada communities near government ranges operated by the Energy Dept. and the Air Force.

Possibly prototypes or concept demonstrators of the Air Force B-2 or Navy A-12, the fairly flat, triangular-shaped vehicles have a rounded nose, rounded wingtips and probably no vertical tail surfaces. The flying wings' trailing edges may be slightly curved, but definitely are not sawtooth-shaped like those of the Air Force's B-2 bomber, according to reports received so far. One observer in Nevada described the shape as "like a manta ray."

Key sightings include:

- A daytime observation near the Tehachapi mountains (about 30 mi. northwest of Edwards AFB) in early May verified this craft's triangular shape. Numerous earlier sightings had been at night, although several were under a nearfull moon that provided enough illumination to identify a large, triangular planform. The Tehachapi report noted that the aircraft was light-colored, but had a dark area near the center of the trailing edge, presumed to be the engine exhaust area.
- On the night of May 3, 1990, a quiet aircraft matching the triangular description was reported by five different observers over a 4-hr. period. One or more of the aircraft made multiple passes over Tehachapi, Mojave, Lancaster and Palmdale, Calif., during this time.
- A triangular aircraft also has been seen flying with multiple-ship Lockheed F-117A flights. Typically, the stealth fighters fly alone, spaced about 8-10 min. apart—a general pattern that has characterized F-117 operations since they were first observed in California in mid-1989 (AW&ST May 1, 1989, p. 24).

However, on several occasions, the larger, triangular aircraft appeared on the same general flight path as the F-117As. It was seen after about three or four of the stealth fighters had passed, yet was ahead of another three or four. It has been spotted repeatedly over the northern end of the Antelope Valley, near Edwards AFB and Mojave, Calif., as well as in central Nevada.

This vehicle is quieter than the F-117As—which already are substantially quieter than an F-15 or F-16—and definitely larger. It normally displays a lighting pattern similar to that of the F-117s—single amber lights under the wingtips and a red beacon near the nose—but can be distinguished by its characteristic

The 'pulser' is separate from the triangular-shaped aircraft and may be capable of hypersonic speeds

hushed engine noise and larger planform.

All observer descriptions of the triangular aircraft correlated closely, and the observer who reported seeing the vehicle before sunset sketched a top view. That sketch matched descriptions of similar vehicles supposedly seen in Nevada-based government hangars several years ago and flying in military operating areas nearby.

Workers who were assigned to one or more of the classified Nevada locations in the past agreed the triangular shape of the reported aircraft "has been around a long time" and is a planform familiar to those associated with that community. Recent disclosure of an A-12 artist's depiction, and reports over the last few years of "large, black flying wings" approximating the B-2's shape, would support that assessment (AW&ST Aug. 20, p. 17).

One of the earliest accounts of such a vehicle was reported by Timothy B. Reynolds, a computer system manager in Houston, Tex., who saw a triangular-shaped aircraft parked in an Ellington AFB hangar in the late 1960s. The aircraft had an estimated 30-40-ft. wingspan, no visible cockpit, no vertical tail and tricycle landing gear.

Two 4 × 12-in. rectangular openings in the wing leading edge, one on each side of the nose, appeared to be engine inlets, although no cowlings or engine pods were visible. The vehicle was relatively thin, measuring about 4-5 ft. thick at the center and tapering to each wingtip. Reynolds described the aircraft as "very roundedwith a molded look-and gray-colored."

Initial sightings of flying wing-type vehicles in Nevada occurred as early as the mid-1980s, but these are believed to be different from the A-12-like triangular aircraft. At least one—described as large, black-colored and very quiet—was seen at close range in the daylight. Subsequent sightings in southern California were reported a few months before the Air Force/Northrop B-2 made its first flight, which fueled suspicions that a B-2 prototype or concept vehicle was being flown.

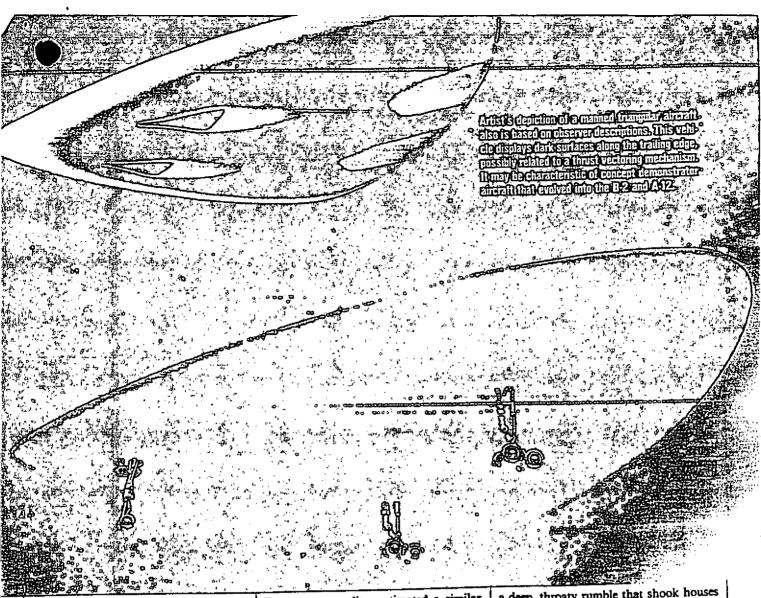

Subsequent to the bomber's maiden flight, reports of a wing-shaped aircraft flying at night did not correlate with known B-2 flight tests. A number of positive sightings on moonlit nights occurred during B-2 downtimes, further discounting the possibility that the unknown vehicle was the new stealth bomber. Senior Air Force program officials have repeatedly denied the existence of any B-2 prototypes or concept demonstrators, although this may be a matter of semantics. Reports from people who worked with such vehicles and from numerous observers who have seen them suggest that there were, indeed, highly classified flying-wing vehicles being tested in Nevada and at White Sands, N. M., prior to the B-2's rollout.

A totally separate, distinctly different type of aircraft seen and heard in California and Nevada over the last year is characterized by a loud, very deep, rumbling engine noise. At times, the exhaust noise is punctuated by a slow-frequency (about 1 Hz.) pulsing sound, which has prompted observers to call this aircraft the "pulser." The aircraft also produces a sausagelink-shaped smoke trail or vapor contrail when it is pulsing (Aw&ST Dec. 18, 1989, p. 42). This vehicle is not the triangular-shaped aircraft discussed earlier, and may be capable of hypersonic speeds.

At other times, however, the aircraft exhibits a more continuous noise without the pulsing characteristic. Observers are confident it is the same type of aircraft, based on its distinctive deep, loud roar.

There have been multiple reports of "pulser" flights, including:

- The first, in July, 1989, at about 3 a.m. near Edwards AFB, Calif. The vehicle was at medium altitude, flying very fast and exhibiting the characteristic pulsing sound. The "pulser's" position was marked by a white glow, rather than a distinct point of light.
- An early evening takeoff from Edwards AFB on Oct. 18, 1989.

U Multiple reports of an aircraft having a deep, pulsing roar flying over central and eastern Nevada during the early morning hours throughout the past year.

Eight separate reports of an aircraft exhibiting the same characteristics; always flying on a northerly heading near Mojave, Calif., between midnight and about 5 a.m. It was typically at lower altitude and slower speeds than when first seen in July, often had a slower pulsing sound and displayed only two position lights.

and displayed only two position lights. It Six reports of an extremely fast-moving vehicle in southern California's skies, ranging from Santa Barbara on the Pacific coastline to near George AFB at the eastern end of the Antelope Valley. These aircraft typically were flying at very high altitude, were seen as a single bright light, and seldom changed direction. Speed changes have been observed, and, on occasion, a pulsing red or white light was seen. Whether these so-called fast movers also are the "pulser" aircraft is not known.

A Santa Barbara observer estimated the aircraft crossed "some 350 mi. of night sky off the Pacific Missile Range bases in about 6 min." (AW&ST Jan. 8, p. 74). One AVIATION WEEK & SPACE

TECHNOLOGY editor estimated a similar aircraft—seen as a bright point of white light—required less than 20 sec. to transit about 70 deg. of sky.

On June 19, 1990, the loud, deep-roaring vehicle was seen and heard twice near Mojave—once at 3:44 a.m. and again at 4:50 a.m. Both aircraft were on a northeasterly flight track and at medium altitude. There was no way to determine whether they were the same aircraft.

Typically, the aircraft are seen flying a southwest-to-northeast track, skirting Edwards AFB and the China Lake Naval Weapon Center. This routing would suggest the aircraft are returning from test ranges or "work areas" off the western U. S. coast, where airline pilots have reported seeing very high-speed vehicles maneuvering at altitudes above 50,000 ft. To local test pilots, these overwater areas are known as ideal locations to conduct performance flight testing, since calm air conditions typically prevail there.

On Oct. 18, 1989, the "pulser" apparently took off from North Base, an airfield at the north end of the Edwards AFB complex primarily devoted to classified programs. The noise from that takeoff was described as extremely loud, with

a deep, throaty rumble that shook houses 16 mi. away, drawing residents into the street. One observer claimed the noise compared with that of Saturn 5 rocket tests conducted at Edwards AFB in the 1960s and 1970s.

Although no lights were seen, the deep, vibrating roar continued for about 5 min., and its source appeared to be climbing steeply to the north. "Your eyes tended to follow the noise; something was climbing at a very steep angle," one observer noted. Residents of surrounding communities reported that the sound "was like the sky ripping," and was unlike anything they had heard in the Edwards area for years.

The same pulsing, very loud, rumbling type of engine noise has been reported by multiple observers in central Nevada as well. It typically was heard in the early morning hours and was described as having a 1-2-Hz. pulse rate. One Nevada-based observer said the same pulsing aircraft departed from the Groom Lake range and flew over a nearby community as recently as Aug. 6. It was "the loudest thing I've ever heard. It wasn't breaking the sound barrier, but it was rattling the windows!"

Triangular Recon Aircraft May Be Supporting F-117A

WILLIAM B. SCOTT/LANCASTER, CALIF.

The U.S. Air Force is believed to be operating several highly classified triangular-shaped stealth aircraft with its Lockheed F-117A fighters, to provide real-time reconnaissance imagery.

The single-pilot aircraft also could eventually support B-2 bomber missions in a similar manner, possibly augmenting other systems in locating and attacking mobile strategic missiles.

About 25-30 of the special reconnaissance aircraft—designated the TR-3A "Black Manta"—could be placed in service eventually, based at Holloman AFB, N. M., and Tonapah, Nev. Initial TR-3As are collocated with F-117As, although housed separately in larger hangars.

Several TR-3As are believed to have been deployed temporarily to Alaska, Britain, Panama and Okinawa. More recently, they are believed to have supported F-117A operations in the Persian Gulf war.

The aircraft is designed to collect and transmit near-real-time digital photo data for immediate tactical applications. With a range of more than 3,000 naut. mi. and the ability to operate at both low and high altitudes, the TR-3A is a stealthy, versatile reconnaissance plat-

form capable of both tactical and strategic duties.

By employing sophisticated digital transmission techniques, the TR-3A can relay time-critical data through airborne Lockheed TR-1 aircraft or military satellites such as the Defense Support Program spacecraft. Consequently, electrooptical data reach end-users in minutes rather than the hours required today with systems that rely on photographic film.

The need for more timely reconnaissance data has prompted developments of new real-time systems for the RF-16 such as the Advanced Tactical Airborne Reconnaissance System, or ATARS (AWAST Apr. 22, p. 78).

During Desert Storm, TR-3A data might have been limited to F-117A support only, possibly for intelligence security reasons. Allied Central Command officers acknowledged that obtaining adequate reconnaissance information was a definite weak link in the air campaign.

At one point, Saudi Arabian air force Northrop RF-5s were requested to augment USAF RF-4C operations. This implied that TR-3A data were not distributed widely for use by other than F-117A forces.

TR-3A, based on the Northrep THAP, is believed to be a stealthy, triangular vehicle about 42 ft. long and 14 ft. high with a 60-65-ft. wingspan. The recomalisance aircraft reportedly has a range of more than 3,000 nant. ml.

Some industry experts believe the Air Force intends to use TR-3As with the B-2, possibly to bolster the bomber's effectiveness against relocatable targets such as strategic missiles. Critics of the B-2 have repeatedly seized upon this apparent deficiency as partial justification for canceling the next-generation strategic bomber program or severely limiting its production run.

For years it has been suspected that a closely held aircraft such as a TR-3A existed, although its designation and mission were unclear. The classified reconnaissance aircraft has been observed flying at night with multiple F₂117As near Edwards AFB, Calif., since 1989. A

TR-3A Evolved From Classified Prototypes, Based on Tactical Penetrator Concept

LANCASTER, CALIF.

The U.S. Air Force's stealthy near-realtime reconnaissance aircraft, the TR-3A, evolved from a number of 1970s-cra classified programs aimed at developing both a deep-interdiction strike fighter and a companion vehicle to gather target location data

Sponsored by the Defense Dept., Central Intelligence and Defense Intelligence agencies, the Air Force and possibly the U. S. Navy, several of these "black world" study contracts were awarded in 1976. For example, the Air to Surface Technology: Evaluation and Integration (ASTEI) program was created to develop concepts for an advanced deep-interdiction fighter. Three contractors Boeing, McDonnell Douglas and Grumman were awarded \$600,000 study contracts. and charged with developing mission-oriented concepts that included low radar. cross-section (RCS) airframes. The same year, the government's

"Blue Team" was formed to identify op-

ogies produced by ASTEI, Have Blue and other classified efforts. At least 10 separate "black" aircraft programs based on stealth techniques were recommended to the services and intelligence agencies between 1976 and 1983. These included fighter, attack and bomber aircraft, as well as cruise missiles and unmanned acrial vehicles (UAV).

Two key proponents of stealth aircraft at that time were Lt. Gen. Robert Bond (who was killed in an aircraft crash in 1984) and Lt. Gen. Thomas Stafford (USAF, Ret.), a former astronaut and onetime commander of the Flight Test Center at Edwards AFB, Calif.

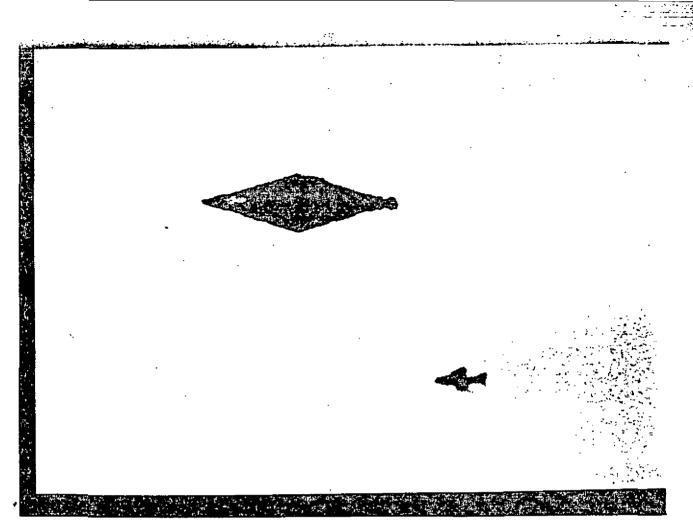

Blue Team efforts eventually prompted the Air Force to initiate the Covert Survivable In weather Reconnaissance/Strike (CSIRS) program, which was to yield two separate stealth aircraft designs. One was to be a factical strike fighter, the other would be dedicated to a factical reconnaissance role. The program was jointly

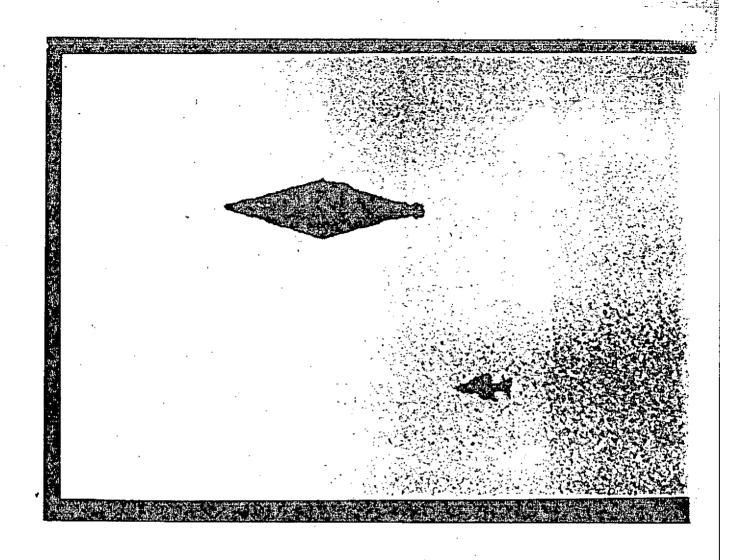

Avionics laboratories at Wright-Patterson AFB, Ohionics 10 (See aland

In mid-1976. Lockheed was awarded a contract to build two stealth fighter prototypes under the Defense Advanced Projects Agency's Have Blue program, edging out Northrop's design (AW&ST Apr. 22, p. 30). The Air Force also initiated wind tunnel and RCS model tests of a Tactical High Altitude Penetrator (THAP) spanloader concept based on proposals submitted by Northrop under the ASTEI and CSIRS programs. Northrop received a fixed-price research and development and demonstration/validation=contract from the Air Force in late 1978 to build a stealthy high-altitude tactical reconnaissance aircraft A THAP demonstrator made its first flight from the secluded Groom Lake, Nev., facility in 1981 in ligarimave.

The company reportedly received a follow-unitAir Force contract in 1982 to build what was to become the TR-3A.

PHOTO OF UFOs

I have been sent 2 photos taken in 1978 by the daughter of a Norwegian Section 40 when she was an air hostess. The photos taken on approach to Rhodos supposedly show two UFOs. I pass them on for what they are worth - perhaps you know of a Department who might be interested.

My reaction on first seeing the photos was that the lights are lens reflections, but perhaps some of your technical staff can have a closer look.

Enclosure:

1. Letter from Section 40

plus 2 photos

Wingcommander Section 40
British Embassy,
Oslo.

Dear Sir:

I am sorry that it lasted so long time before I could send You the mentioned picture - sending two for stereoscopic view. Since, I would say, september 1991 I have not been well enough to use my typewriter.

As I told You, my youngest daughter was for some years an air hostess and the picture that I send You was taken on approach to Rhodos in the year 1978.

By looking stereoscopic I hope that it is possible to see if the <u>UFO</u>'s are on the move.

 ${\tt NB}$; The blank surface on the pictures are untouched by hand.

with the compliments of WINISTRY OF DEFENCE

UFO REPORTS

I've attached a copy of a UFO report submitted by the Captain of an aircraft flying access the Atlantic. The report sounds like some forms of meteorological phenomenon

J'us also attached a cos; of RAF Buchan's 162825 & Jan 92 interesting, as the UFO was seen on 3 successive days! It sounds Similar to the other report The attached, which was reported through RAF Kinless. Any ideas on this one?

I've sent a Standard reply to Section 40 but there may be a (arrebut in view of previous sightings and press interest reported in Para O.

MOD FORM 195

From: Section 40

16 January 1992 81

Dear MOD.

On my way home on the MI South bound from Leeds on Tuesday 14 January approx 7.15 Pm I was aware of 4 Strange lights above me. The lights were of oval shape, quite large and hovered very slowleys: very Slowley: Very Slowley:

I know this was not an air-craft, Helicopter or weather Balloon because the lights were for to by to be any of them, and it moved to slow. (A side to side motion rather than forward).

They were 3 other people in the car who, witnessed this and they watched it for about 3 minutes above the motorway. I saw very little of this because I was driving and for obvious reasons could'nt gaze out. The Incodent happened above Wakefield close to the Barnsley Side.

There is not encounted anothing uniqued he fore and Thave not encounted anything unusual before and Tim not Into U.F.O..

I work for the civil Service so I'm no Freak and have my with about me.

I was not going to report this incodent but was persydded by my work mates to do So, after mentioning the Subject today. the Subject today. I must point out that it was definatly not a plane a any other aircraft I could Identify.

> yours faithfully, Section 40

The Officer-in-Charge Flying Complaints Flight Provost and Security Services RAF Rudloe Manor Corsham, Wilts.

18th December 1991

Dear Sir,

Unidentified Flying Objects - evening of 17th August 1991

I am writing to you as I believe you may be interested in my report, given the locality. I apologise for the fact that the events are four months old.

On Saturday, the 17th of August, I was at Rudloe Park Hotel for an evening wedding reception. At about 11.35pm I went into the garden where about ten others were standing. As I was due to drive home later I had not been drinking alcohol so my faculties were intact. As your metereological records will show, it was a fine, clear evening with no wind; the stars were visible, even the Milky Way. I am fairly well acquainted with observing the night skies as I have an astronomical telescope. I am used to seeing planets, aircraft, meteors, and satellites, all of which are frequently mistaken for UFOs by those who are not acquainted with the night sky.

I am also aware of the effect of air bubbles in the fluid of the eye which can sometimes be mistaken for objects seen in the telescope. While these are spherical they are unique to the particular eye of that observer and I know what mine looks like and where it is situated in my field of vision.

The group I was standing in suddenly became aware of an object travelling in a south-westerly direction directly above us. Coincidentally we also saw some fireworks in the sky over Corsham a couple of miles to the west. At first we thought the object was part of the display that had drifted our way but as it took more than two minutes to traverse our field of view and maintained its height it clearly was not a firework.

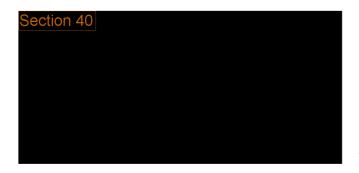

The object was spherical with flames around the edge. The centre was not bright but illuminated like an orange glass globe lit from within. Our first thought was that it was a hotair balloon but we discounted this explanation for a number of reasons. Firstly, it was a very dark sky, (the moon having set about two hours before), and balloons cannot fly at night. Secondly, it moved at a steady speed, around 60 mph if its apparent height of 1000 feet plus was correct, (difficult to judge), and there was no wind. Thirdly, there was no sign of a basket slung underneath, which would have obscured a portion of the light of the globe. The band at the reception was playing so it was difficult to tell if the object was emitting any sound.

Its size was difficult to judge but given its apparent height it may have been 40 to 50 feet in diameter. I do not have flying experience so my judgement as to height, size and velocity will not be accurate. Ny impression though was that it was of a large size and at an altitude that was not immediately overhead. As it looked like no aerial transport I had seen before it was impossible to judge scale.

We watched as it progressed to a point where the nearby trees obscured it as it headed for the horizon. We were still in the garden at 11.50pm when an identical object flew over at exactly the same height and speed. The fireworks in Corsham had finished by this time.

These objects were definitely not like any astronomical phenomenon I had observed before. Have you had any other sightings reported that corroborate my account? I wonder if the radar records at RAF Colerne confirm that two craft flew into the local airspace at those times? One reason I am writing to you is to ensure you are aware of these strange phenomena in our airspace. Have you any idea what they were?

Yours faithfullly,

LOOSE MINUTE

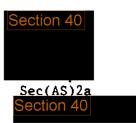

10 December 1991

UPO SIGHTING - DYFED/HEREFORD - MONDAY 9 DECEMBER 1991

- 1. We have received information about a UFO sighting which occurred yesterday over South Wales/Hereford and Worcester.
- 2. The sighting occurred at approximately 1650Z yesterday, and reports were made to a number of different locations, including the police at Worcester and Dyfed, local fire brigade stations, the CRO at RAF Hereford (where there were a number of military witnesses), and Duty Officers at RAF Shawbury, RAF Brampton and in Main Building. The Distress and Diversion Cell at West Drayton also fielded a number of calls. I understand that the sighting was reported on local radio and television, and reports appeared in the Shawbury Star and the Manchester Evening News.
- 3. The object seen was a bright white light, at a high altitude, with flames (or an illuminated vapour trail) in its wake. Many witnesses believed that they were witnessing an aircraft accident, and some reports indicated that the object broke up. A few seconds after the sighting, a low rumbling sound was heard, and some windows were seen to be shaking.
- 4. A local reporter (ex-RAF) phoned the CRO at RAF Hereford to say that he had witnessed the object through binoculars, and believed it to be a Tornado flaming out and subsequently recovering power. IFS(RAF) are not aware of a flight safety incident, but if one has occurred, it would normally be reported by signal within 48 hours. I will advise if a report is made. Routine use of afterburners, however, would not be unusual at all.
- 5. For the time being we are treating this as a UFO incident. I would be grateful for any light addressees can shed on this sighting. I will advise of further developments, and forward any reports that have not been copied to you.

UFO SIGHTING - DYFED/HEREFORD - MON 9 DEC 91

References:

- A. D/Sec(AS)12/3 dated 10 Dec 91.
- B. D/Sec(AS)12/3 dated 28 Nov 91.
- 1. I am afraid I am unable to shed light on the incident you refer to at Reference A. Furthermore, the Air Defence Ground Environment (ADGE) System would also be unable to give us any more help because of the area. It does, however, sound very much like an aircraft engine going in and out of reheat.
- 2. I have also attempted to follow up the other incident, at Reference B, in the Edinburgh area. Once again, I am afraid the ADGE organisation has been unable to shed any further light on the incident for the same reason, ie it was outside the normal area of operations.

22nd November 1991

Dear Sir,

Further to our telephone conversation of today Friday 22nd November 1991. I enclose details of the observations made by a number of Civil Servants in an Edinburgh Office block on the late afternoon of Wednesday 20th November 1991.

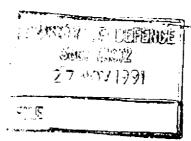

The witnesses have described the following incident:

During the period 15.50 hours until 16.15 on 20.11.91. Several objects were observed making erratic movements to the East of Edinburgh. From the vantage point in an upper floor of an office Block on the West of Edinburgh, the objects were seen above the local Edinburgh landmark of "Arthurs Seat" which is a large volcanic hill two miles to the East of the City Centre and an estimated 6 miles line of sight from the point of observation.

It is fair to add that several witnesses thought that the objects may have indeed been a greater distance to the East but in the same general direction.

The objects were not identified as conventional aircraft due to the very erratic movement patterns they made.

At around 16.15 a Civil aircraft thought to have been an Edinburgh bound Shuttle made its appearance in the same general area of airspace. As the Aircraft approached the objects they were seen to scatter upwards at phenomenal speed until they disappeared.

I find it hard to beleive that military aircraft would be operating in this area so close to traditional Civil air routes and I would be grateful if you would assist us by confirming whether or not there may have been Military manouvers at the above location and time.

I would also be most grateful for any other non confidential information that may assist us in our investigation into this incident.

Yours faithfully

They will receive the right to acquire full ownership or to lease them. The range of services provided by our ground stations is being widened considerably.

The new policy has been approved not only by the countries participating in Intersputnik, for it is also receiving international support. Evidence of this is the accession of the organization's sixteenth member, Syria, and a memorandum of co-operation with the Intelsat satellite communications consortium. Germany has declared its desire to become the GDR's heir in Intersputnik. An accord has also been reached with US firms to develop a joint television and telephone bridge between America and Europe. (TASS World Service in Russian 1608 gmt 18 Oct 91)

[4]

Plisetsk launching ground boss embraces glasnost (Ted) For the first time, the new head of the launching ground at Plisetsk, Maj-Gen (?Perminov), at his own initiative notified the Arkhangelsk Oblast administration of a forthcoming sate!lite launch. He gave details of the aims of the launch, the flight path and where spent sections of the rocket would be discarded. The general promised to tell the White Sea area administration should anything not go according to plan. The launch was a success. Reporting this, the newspaper 'Pravda Severa' calls upon the sailors, submariners and nuclear physicists of the Novaya Zemlya range to follow this good example. (All-Union Radio, Mayak 2300 gmt 18 Oct 91)

[5]

UFO sighting reported in Kazakhstan (Text) Residents of this regional centre in Kazakhstan sighted an Unidentified Flying Object last week, the local youth newspaper 'Express-K' reports today. The UFO, seen on the eve of the Soviet-Austrian space crew's landing, was described by eye-witnesses as a saucer with a semi-transparent halo and rays "shooting out" in different directions. According to the newspaper, this was not the first time the local residents observed the phenomenon in the sky over the city. Suprisingly enough, UFOs take the same route, flying from the north down to south, towards the usual landing area of Soviet cosmanauts. The newspaper claims UFOs obviously display keen interest in either bauxite deposites located in the area or in the Soviet space programme. (TASS World Service in English 1422 gmt 16 Oct 91)

DI55c - Section 40

UFOs - PHOTOGRAPHS

- 1. We spoke recently about the possibility of trying to obtain the photographs of the UFO seen over Porlock by Section 40
- 2. We have given this very careful consideration, but regret that we do not believe we should follow this up.
- 3. There is a very good chance that any efforts we make to obtain photographs or videos of UFOs will come to the attention of the press and/or the UFO lobby, and this could be seen as MOD investigation of UFOs something that we (and, far more importantly, Ministers) have said we will not do.
- 4. Having said this, we will continue to look at each such request on its merits. Additionally, if we are ever directly offered photos/videos, we will say that we are prepared to have a look at them.

I am sorry to bother you with what may well turn out to be an easily explainable UFO sighting, but I promised the witnesses to inform the MoD about it.

Section 40 and Section 40 plus three other students from Eastbourne College, claim to have observed a peculiar flying object in Hyde Park, London, on Monday 26 August, between 18.30 and 19.00 hrs. I append their separate sketches of the object, which they are convinced was not a kite or balloon.

The object appeared to be moving fast at a high altitude, and glistening or rotating. It also appeared to be surrounded by a heat haze, which made the object look black at times. The entire sighting lasted for about fifteen minutes.

These are all the details I have. Perhaps you could be kind enough to let me know if you received any other reports at that time?

With many thanks in advance,

encl.

Dear Sir,

Section 40

Section 40

which is very close to Heathrow Airport. I was cycling home on Monday 14th October from the main college campus at about 12:15 am (00:15) when my attention was attracted by an extremely loud buzzing sound, not unlike that of a car alarm or rape alarm, but much louder. Looking up into the sky I saw a single intensely bright white light flying above me, flying too highly to be an aeroplane landing or taking off. This aircraft remained flying parallel to me, even though I was cycling along the bends and curves of Coopers Hill Lane, giving me the absurd impression that I was being followed. On arriving home and dismounting my bike, the deafening noise and light suddenly and instantaneously disappeared.

I would be very grateful if you might be able to explain what exactly the noise and aircraft were. I would appreciate hearing your opinion on the matter. I usually enjoy observing the planes flying to and from Heathrow and would be interested to find out what this aircraft was.

I thank you for your attention,

Yours Faithfully,

- I attach at E6 a self-explanatory draft response to the letter at E5.
- Given that a three metre long object seen from a distance of 1000 feet would have appeared very small to the maked eye especially at 9 o'clock in the evening when the light would have been failing. The estimated length of the object must also be treated with caution as, despite the undoubted experience of the crew, it is notoriously difficult to assess dimensions when no references are available. Hence it is probable that the object was not a missile; indeed it may have been another aircraft which, incidentally, would not have required Air Traffic Control clearance to fly at that height if it was clear of controlled airspace such as airways.

Section 40 Sec(AS)2

30 September 1991

Section 40

D/US of S(AF)/ADG 5597 Thank you for your letter of 5 September 1991, in which you raised further questions about the air incident over Kent on 21 April 1991. Firstly, I can confirm that whatever was seen was not connected with any USAF activity. With regard to the criteria used to judge if such sightings represent a threat, the staff in my Department who are responsible for the air defence of the United Kingdom assess such sightings based on military expertise and an analysis of the available information. Unless it is judged that a sighting does present a threat, and I can confirm that this has not been the case so far, no further attempt is made to identify what was seen. You also asked about warning systems and the possibility of a hostile response being triggered. The UK operates a range of warning systems, but there are, of course, sophisticated operating procedures and safeguards to ensure that any response is appropriate to the circumstances. I can confirm that the incident over Kent did not result in any response. As far as a review of UFO sightings is concerned, I am afraid that I simply could not justify the use of defence funds on such an investigation, unless a clear threat to the security of the UK had been identified, and as I have

already said, no reports received to date fall into this category. Any air safety implications are, as I have already indicated, a matter for the CAA.

I hope this is helpful.

AIR INCIDENT OVER KENT

- 1. I attach a copy of a Parliamentary Enquiry that we have received from Paul Murphy MP.
- 2. Some addressees may already be aware of the "Alitalia incident", in which the pilot of an Alitalia aircraft reported a near-miss with a missile-type object on 21 April 1991, over Lydd in Kent. at a height of approximately 22000 feet. I have attached a copy of the pilot's report and a newspaper article about the incident for ease of reference.
- 3. Although an object was seen on radar, subsequent enquiries were not able to identify it.
- 4. Could SRAFLO confirm that the object was not connected with any USAF activity.
- 5. I would be grateful if D Air Def could supply some unclassified sentences to cover the MP's point about a response from warning systems, and the possibility of a hostile response being triggered.
- 6. In order to meet our Parliamentary deadline, can I ask for responses by cop Wednesday 25 September.

PAUL MURPHY, MP, House of Commons, London SW1A 0AA

Ce. CALL

Desk Phone Messages Pontypool Office

FAX Numbers:

5 September 1991

The Earl of Arran Ministry of Defence Main Building Whitehall LONDON SW1A 2HB

Dear Lord Arran

Thank you for your letter regarding the subject of an air incident over Kent, and the reply sent to my constituent Section 40 I am still very concerned that the Ministry of Defence does not know what the UFO was, and I believe that the matter raises the following:—

Can you state with equal certainty that the 'missile' did not originate from USAF aircraft or bases in Britain?

If, as stated, you have no idea what the objects are, what criteria is used to judge whether they are a threat, have any to date been regarded as a threat?

Did the Alitalia incident produce any response from these warning systems? Is it not a grave dangerthat one of these unidentified objects will trigger a hostile response with potentially disastrous consequences?

cont...../2

Every one of the thousands of reports has been dismissed by the MoD as no threat. Surely, whatever criteria are used to judge them individually, the large accumulation of reports that the MoD now possess, demands a review of this phenomenon, its implications for air safety and the defence of the United Kingdom.

I look forward to your reply.

Yours sincerely

PAUL MURPHY, MP

Inquiry into pilot's sighting of missile

THE CIVIL Aviation Authority has launched an investigation into a reported near-collision between a passenger airliner and a missile in civilian airspace over Kent.

But the Ministry of Defence said it could not have been a British missile. The CAA says that there were no other aircraft under its control there and that it has still failed to explain the sighting.

Captain Achille Zaghetti, pilot of the McDonnell Douglas MD80, operated by the Italian airline Alitalia, was flying from Milan to Heathrow at 22,200ft, with 57 people on board, on 21 April when he reported to British Air Traffic Control that a missile had flown less than 1,000 feet above him in the opposite direction.

It was 9pm, still light in the air, and the local air traffic controllers at Lydd airport said the visibility was exemptionally good.

was exceptionally good.

Capt Zaghetti said the missile was light brown and about 3 metres long. His co-pilot confirmed the sighting. Their descriptions are consistent with a target missile used for artillery or air defence practice, but the Ministry of Defence insisted yesterday that none were in use on 21 April.

Although it has taken the report of an experienced pilot at face value, in a public statement yesterday the CAA attempted to imply that he had seen a drifting object, perhaps a stray balloon.

The Independent'

By Stephen Ward

The statement said: "The pilot said the object was light brown, round, 3 metres long, and did not describe any means of propulsion. The aircraft was under the control of the London air traffic control centre who had no other aircraft in the vicinity but consistent with the pilot report, a faint radar trace was observed 10 nautical miles behind the Alitalia aircraft.

"The air traffic controller submitted an occurrence report and investigatory action began immediately. Extensive inquiries have failed to provide any indication of what the sighting may have been."

A Ministry of Defence spokesman said yesterday: "Whatever he might have seen might have been something that was flying, but was certainly not anything that was fired. It was a Sunday. The only ranges we have in the Kent area are Lydd and Hythe, and they are concerned with small arms only."

Asked if target missiles were used, he said: "It's absolutely in the middle of the busiest air traffic area. People just don't fire missiles there, but of course, we do have quite a few UFO reports and often people who see these things describe them as missile or cigar-shaped, or else round, and sometimes they do appear to be travelling with normans of propulsion."

Summary of Activity No 175 for 24 hour period ending 0001Z 11th September 1791

Duty Officer ROS

Section 40

SOVIET AIR ACTIVITY

1. Two Soviet Bear Deltas entered the UKADR at 1200Z and were trailed by USAF F15s from Keflavik. An RAF GRA Tornado from Leeming took over the shadowing from 1315Z. The Bears operated between the Farne Islands and the Orkney Islands before leaving the UKADR at 1550Z. Three RAF Tornados were involved, supported by 2 VC10 tankers. Two Soviet Bear Foxtrots operated around 70N 11W, just outside the UKADR.

POSSIBLE MISSILE SIGHTING

2. A GFI pilot and his student, flying a general handling mission from Cranwell, were at 20000 feet when they both saw a "possible missile" shoot up about 5 miles from their aircraft, a Tucano. The missile went up to 25000 feet and appeared to explode. HQMATO are examining radar tapes for clues as to what happened. Both civil police and RAF police are also carrying out investigations.

SEARCH AND RESCUE

RAF Search and Rescue forces were involved in 5 incidents.

We have already usumed The win be (AS).

LETTER FROM

Section 40

UFO's

- 1. In the light of our recent meeting, the points raised and discussed, I believe any further information made available to Section 40 would only add fuel to the fire.
 - 2. Clearly the incident happened, and clearly the pilots saw what they believe (with hindsight) to be a stealth aircraft. I doubt very much if the United States Air Force or even the Soviet Air Force (if they were flying) would do anything.
 - 3. I therefore agree with GE 3 Wg Cdr the only way ahead for the good Section 40 is probably with the Dutch MoD. However, I am sure that our Dutch allies will not be sending us any free clogs for some time to come if we add our blessing to them being introduced semi-officialy to one of our regular UFO problems.

DI 55c

LETTER FROM Section 40

UFOS

Reference:

- A. D/Sec (AS)12/3 dated 18 Jul 91.
- 1. Thank you for your letter seeking guidance regarding the level of detail you should provide to Section 40 in response to his query over UFOs. Whilst this is primarily a concern for DI55c, my comment would be to the effect that there is, in fact, little detail that you can divulge.
- 2. The incident, 1800z on a Nov evening, clearly indicates that it took place in the dark. I would have expected the report to be a flight safety incident report if another aircraft had been involved; the report does not confirm that the other Tornados were in formation nor that they actually saw the same object. DI 55c will be able to confirm, through RAF Fylingdales, whether a satellite decay took place. Finally, it should be noted that the incident took place outside of the UK. Supposedly the US DoD has already commented and perhaps Section 40 should now be advised to contact the Dutch MOD for any further information.

mentioned in

Section 40 Sec(AS)2 Section 40

26 July 1991

D/US of S(AF)/ADG 5597

Thank you for your letter of 5 July 1991, enclosing one from your constituent, Section 40 of Section 40 on the subject of an air incident over Kent.

My officials have replied to letter pointing out that the report of the alleged air incident over Lydd was made in the first instance to the Civil Aviation Authority (CAA) who are responsible for examining such reports to determine whether there are, inter alia, any air safety implications. Section 40 may wish to contact the CAA direct regarding the report of the air incident and their conclusions.

As far as the MoD is concerned, we have been able to rule out the possibility that what was seen was a missile from Army firing ranges in the Lydd area. Additionally, we have no reports of any space related activity which could be used to provide an explanation for what was seen, and the description of the object given by the Alitalia captain does not correspond with what would be expected if the object had been a meteorological balloon.

The MoD's only other interest has been to determine whether or not the incident presented a threat to the security

nd defence of the United Kingdom. In this instance my

Department do not consider that such a threat was presented and,

as is the case with other similar reports of Unidentified Flying

Objects, it is not our policy to undertake further investigation.

I hope this is helpful.

THE EARL OF ARRAN

Thank you for your letter of 10 June to the Secretary of State for Defence on the subject of a Sunday Times article regarding an Air Incident report made by an Alitalia pilot, which has been passed to me for reply.

I can confirm that the Civil Aviation Authority (CAA), to whom the incident was originally reported, have asked MoD for assistance in examining the Air Incident report made by the Alitalia MD80 aircraft's pilot. You may wish to contact the CAA separately regarding the report and their conclusions.

Yours Sincerely, Section 40

Enc

7

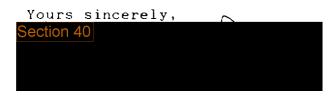

10th June 1991.

Mr Paul Murphy M.P., The House of Commons, Westminster, London.

Dear Mr Murphy,

I enclose a copy of a letter that I have written to the Secretary of State for Defense, along with a copy of the Sunday Times article which I refer to in the letter. I am sure that you will share my concern about this matter, it occurs to me that Parliament and the Public should be informed of the circumstances surrounding this incident. A simple denial of responsibility by the Ministry of Defense is not sufficient, I would be grateful therefore if you would pursue this matter, and if possible question the Government in the House of Commons.

tery missile' over Kent coast

CHI

secret," said Cleo Proctor, duty controller.

But an MoD spokesman denied there were any military operations in the area. "The area in question, because it's a very busy civilian route, is not somewhere we are allowed to exercise," he said. According to Lennox, a tar-

According to Lennox, a target missile, although it does not carry a warhead, could destroy an aircraft. "If it hit the cockpit, it would kill the crew and bring down the airliner."

A rogue missile was the sus-

pected cause of the mysterious crash of an Aer Lingus Viscount, which plummeted into the Irish Sea from 17,000ft, with the loss of 61 lives, in 1968.

New light was shed on the mystery when in 1974 fisherman trawled up fragments of a target missile or pilotless aircraft. The Viscount was on a flight path south of the military rocket testing range at Aberporth, on the Welsh coast.

The CAA publicly confirmed the sighting over Lydd only last Friday. It said the pilot had described a "missileshaped" object. But Zaghetti was specific in his account to air traffic controllers that what he had seen was a missile.

CAA experts first thought the object might have been an optical illusion. But a radar recording confirmed that the object had left a distinct trace. No other aircraft were in the area.

Al Reid, the operations supervisor at London air traffic control who interviewed Zaghetti after he landed at Heathrow, said the sighting was confirmed by the plane's co-pilot. Both saw it for two or three seconds.

Reid said it was conceivable that the pilot might have seen an optical illusion and that the radar trace could have been a cloud. "We're really flummoxed," he said.

In 1980 an Italian DC9 vanished into the sea near Sicily with the loss of all 81 people aboard. A radar recording showed an unidentified flying object on collision course with the plane just before it disappeared from the screen.

Two years later another Italian DC9 was flying at 27,000ft when it was narrowly missed by a mystery object that exploded close by. Passengers said they saw a "fast-moving projectile, like a missile".

GE3(RAF) DI55c

LETTER FROM Section 40

- UFOS

- 1. Please find attached a copy of a letter from Section 40 together with a copy of an article from FSR (Flying Saucer Review?).
- 2. The letter asks for confirmation of the report by Tornado pilots of seeing lights over the North Sea on 5 November. Having checked our files I have found the attached report (RAF WEST DRAYTON Z6F 061340Z Nov 90) which corresponds in terms of time and place to the incident reported in the article.
- 3. It is part of our stated policy that when a correspondent can identify a particular incident, we are prepared to answer specific queries on that incident if it has been reported to us. In this case, you will notice that Section 40 has mentioned that 'DoD sources' had linked sightings in Northern Europe on 5 November to a satellite re-entry wheras the RAF aircrew who made the report identified their sighting as a possible Stealth aircraft.
- 4. I have a note on file of having spoken to AIS West Drayton on 6 November. They had spoken to Section 40 and mentioned reports which had been made of a sighting outside the UK. This, of course, means that Section 40 is aware we have a report, although he is probably not aware of what is in it.
- 5. I would appreciate your advice regarding the level of detail we should use in our response to Section 40 Would there be any objections to our including the possible identification of a Stealth aircraft in our reply, especially bearing in mind that someone Section 40 'DoD sources'?) seems to have explained the phenomena seen on that day as being due to satellite re-entry?

7. 7.7

one thing seems clear — namely that all of us — Soviets and Westerners and others alike— are today cowering beneath a masty "Second of Daniorles" which may mark the beginning of the end of the reign of this conceited and nivouse creature Homo Sap.

POSTSCRIPT BY EDITOR, FSR.

have not seen a single report about any more such deaths in any British newspaper! I therefore recently asked Mr Tony Collins what he shought about thus, and it seems that he too knows of no new cases. But, since the only official "explanation" for such cases so far has been "STRESS", the situation now becomes astounding. For there has been a continued severe deterioration in the British economic situation.

over the past year, and consequently (\$140.55) mass area be far more prevalent here than ever! Mr. Codins added not that he had not ittought of this, and found my subsection starting.

If, then, "\$1Kb\$5" has truly been the cause, we would then have to accept that, since the end of 1983, the Bitt desauthorities have been consuming the situation so closely that the couple foot or sport of the reliefs of a Bettiern is a situation so the our management of the reliefs of a Bettiern is a situation of the relief.

But, is a concessable that such a drastic censorsup can be in torce and can be sustained? Personnity I down o very much. Therefore it looks as though the situation is esen more mysterious than ever, and one is still left to words; whether an alien influence is responsible? — G.C.

SPECIAL REPORT TO FSR (MAY 1991)

B.A. PILOTS REPORT UFOS OVER CONTINENT AND NORTH SEA. R.A.F. "TORNADO" TAKES EVASÍVE ACTION AS UFOS "FORMATE" ON PLANES OVER THE NORTH SEA

By Paul Whitehead, FSR Director and Consultant

It was dark, early evening (0.15 pm local time), on November 5th 1990, and a flutish Airways passenger accraft was en foute to London, flying over the Alps at 31,000 ft. The crew heard a nearby Lufthansa jet report and query "traffic ahead". The BA captain peered intently ahead into the night sky. What he saw was flatdly what he expected!

(A) the time, the European press reported the incident, and the "official line" was given: the UFOs were in fact "space debris from an old satellite re-entering the atmosphere")

Well, maybe! But more details have now emerged. An author pilot, well known to me and based in the UK, has spoken personally to the flA captain who logged the report, at the request of SIGAP (Surrey Investigation Group on Aerual Phenomena). SIGAP has agreed to the captain's request not to make public his name, in order to protect him from publicity, and FSR respects that request. The airline pilot who spoke to the BA captain also wishes to remain anonymous

What did the BA captain see? Here is his comment.

"I looked ahead and saw, somewhat to my surprise, ahead and to the right and higher than we were, a set of bright lights. One of the lights, the leading one, was brighter than the others, and appeared higger, almost disklike. It was followed closely by another three that seemed to be in a V formation. As I watched, I heard another ameralt crew also reporting seeing lights!

"I watched the objects intently as they moved across my field of view, right to left, ahead and high. It was then, on hearing the report from the other aircraft, that I realised I was watching something much turther away than I first thought. The other report came from brance."

Was it a satellite re-entry? The pilot stated. "It certainly didn't look like that to me. I have seen a

re-entry before and this was different."

But it was the BA captum's forther comments that are easing amazement and intense interest. SIGAP

has released the information to UFO researcher and writer Tim Good, and we hope to have more comprehensive details this year

That same night a colleague of the captain, in another BA aircraft, reported two "very bright mystifying lights" while flying over the North Scall wardays later, an RAF Tornado pilot told the captain that on the same evening (3th November) his Tornado while flying with another squadron aircraft had been "approached by bright lights". The lights, he reported "formated on the Tornadoes". (The expression "formate" is apparently used to indicate a deliberate intent.)

The accompanying Tornado pilot was so concincted that they were on collision course with the lights (apparently nine of them were seen) that he broke away" and took "violent evasive action". This same pilot later added that he thought he was heading directly for a C 5 Galaxy, a giant US transport plane. The formation of UPOs carried "straight on course and shot off ahead at speed — they were nearly some some Some C.F. he said, indicating that they were going faster than the speed a G.5 can achieve. Some C.5!

The pilot known to Paul Whitehead connecticd. "This is all a good true story, and could do with an explanation. All the pilots are adamant that what they should seen was definitely not satellite debris -- and they should know."

It is to be noted that the North Sea ties to the east of Britain and just north of Belgium, and the Belgius. Air horse have recently pursued and filmed UPO over land close to the North Sea, and possibly o eathe North Sea useff (See Reports on "Hugo Fridage) for Craft Over Belgium" in 15R 35/2 and 35/3/3/10 attention of renders is also specially drawn to Office Fowler's report of an extremely similar case (MIC) SEEN PROM (PRIDENT) NEAR EISBON" in 138-1976, which was published in FSR 22/4/1976.

ATC OCCURRENCE REPORT - REPORT OF MISSILE TYPE OBJECT - 21 APR 91

Reference:

- A. CAA 91/01151 dated 10 May 91.
- 1. At Reference you requested military comment on the title Occurrence Report.
- 2. All the information was passed to the MOD and was examined by the departments responsible for the air defence of the UK. We are advised that those departments have not been able to confirm the identity of the object sighted by the Alitalia MD80 crew.
- 3. The MOD were able to rule out the possibility that the object was a missile from the Army firing ranges in the Lydd area. Additionally, MOD has no report of any space related activity which could provide an explanation, and the description does not correspond with that expected if the object had been a meteorological balloon.
- 4. In the absence of any clear evidence which could be used to identify the object, we are informed that MOD will treat this sighting like that of any other Unidentified Flying Object and therefore will not be able to undertake any further investigation into the sighting. We now propose that this Occurrence Report is closed.

To Head ITAU AD52 DI(ST)

Wednesday 19th June 1991

Report by Section 40 (DI52) Reference DI52/TMCK/1

Arrived in my hotel room at approx 2305 and tuned in to Radio 1 "The Nicki Campbell Programme". I had heard last night (18th) that he was going to broadcast a "very controversial" interview regarding UFG's. It was due to start at 2230 so I've probably missed a lot!

The interview was with a Section 40(I believe). He started expounding about his knowledge of UFO's and that 6 alien craft had arrived on our planet! He claimed that senior people in Whitehall and the states know of the reality of these events.

He said this was the "most sensitive area in the UK Intelligence field of all time". Sources had made him aware of MOD intelligence in Northumberland Avenue, and that there was a section DI55 working on this topic in a locked and guarded room No 801 (I think he said). He claimed that the facts relating to UFO's was classified 37 levels higher than Top Secret! Numerous references were made to an ex NASAphysisist Section 40 Appearently, alien craft had been studied, and their propulsion systems were so sophisticated technically that engineers had taken years to derive an understanding. Instantaneous motion. An ex astronaut (I think) Section 40 had chased UFO's. There was video film of them in the Nevada desert. One planet he quoted where aliens had come from (37 light years away) was Zeta Particulii. NORAD track such craft daily he claimed.

He claimed further that the states have a 'Black Budget' for such Projects making it unaccountable to the senate. DSTATIONARY

When asked if he believed George Bush had ever seen one of these "quarantined"? craft, he said he was sure that he had, as they were "available". Parts of his dialogue was linked to the Bible and spiritualism as a way of justifying the reality of such phenomina presumably. He mentioned ASC - alternative space craft. With that the interview ended.

Nicki Campbell asked listeners to phone in if they were interested to find out more. If response was good, he would try and set up a tele link with the states (one of his sources) tomorrow evening (20th).

I'm new to DI (4 weeks). I sat down and spent 30 mins considering what I should do. I didn't have any phone numbers to ring so decided to go to the office (by taxi) (I may put in a bill Ha). Couldn't find any next of kin lists for Section 40 or anyone else. Used Section 40 phone to make him aware of this (via his HOME Button!) This was at about 0005 I guess. He asked me to contact the Duty Officer in MB which I did. Rather than talk on the phone, I went across and told Sqn Ldr good to above. He didn't seem unduly concerned, but said he would pass the details over to the "day shift".

I can't vouch 100% for the accuracy of my recollections above, but took lots of notes throughout the programme so am reasonably confident about names and statements made. It's now 0150 - I'm tired. I should have listened to Radio 4 perhaps! Maybe not. Hope I did the right thing.

%<u>,_</u>B7C2-35.

ETERACIONALIA GANGA

Recommendations

I think it would be prudent to obtain a copy of the transcript of the interview, in order to verify/correct the foregoing for accuracy. I guess then its down to considering whether there is a justification for the security services to take the matter further in view of what has been broadcast.
